## PROJECTS

### ONLINE CREDIT CARD ACTIVATION

- **Description:** Online facility for newly registered customers to activate their credit cards upon registration. This also proved as a means for business to capture customer consent to subscribe them to fraud alerts.
- **Technologies used:** JSP, Bootstrap.

### KNOW YOUR CUSTOMER

- **Description:** The Barclaycard customers were displayed a responsive web-experience upon login, to update their profile with latest information such as address, annual income etc. (compliance requirement).
- **Technologies Used:** JSP, Rest Services, Handlebars.js, jQuery, Bootstrap.
- Developed as a SPA. Client-side error validation, responsive web design.

### PRODUCT UPGRADE OFFER

- **Description:** Redesign of existing upgrade offers functionality on the Barclaycard website. The customers were presented various offers to upgrade their card to earn more rewards points.
- **Technologies Used:** JSP, Rest Services, Handlebars.js, jQuery, Bootstrap.
- Developed as a SPA. Routing implemented in the front end. Implemented analytics to get the insights required for making better business decisions and strategic moves.
- Added data-localization to display partner-specific content.

## STUDENT LOAN REWARDS REDEMPTION

- **Description:** Allowed customer to use their rewards points to pay off their loan amount. The experience had to be responsive, with conditional routing based on user inputs.
- **Technologies Used:** JSP, Rest Services, Angular 1.5, Bootstrap, internal validation framework.
- BAU development, Solution designed to use technologies in roadmap.
- Coordination with Backend developers to minimize data translation & adhere to the contracts agreed upon at the beginning of the project.

## ROUND UP PROGRAM

- **Description:** Allow users to convert the spare amount of transaction as reward points, by rounding off the transaction amount.
- **Technologies Used:** JSP, Rest Services, React 16, Bootstrap.
- Solution designed to use technologies in roadmap.
- Developed independently as a micro front-end. Integrated with main code-base through packaged module.
